English Abstract

This invention relates to amino acid sequences from within a consensus peptide of the formula: VEKNITVTASVDPTIDLLQADGSALPSAVALTYSPA (Seq. &1). Eight mer peptides from within the consensus peptide were tested against an antibody raised to the consensus peptide. Studies relating to antibody raised to denatured proteins from the natural organisms producing the family of proteins were also useful and showed particular value of some sequences. A sequence of the formula ASVDPTIDLLQA (Seq. &2) was identified thereby. An enlarge sequence of the formula TVTASVDPTIDLLQAD (Seq. &3) is also especially interesting as are intermediate sequences such as sequences VTASVDPTIDLLQAD (Seq. &4), TASVDPTIDLLQAD (Seq. &5), and TASVDPTIDLLQA (Seq. &6) as being binding sites for antibodies raised to the denatured proteins.

French Abstract

L'invention concerne des sequences d'acides amines provenant d'un peptide consensus de la formule: VEKNITVTASVDPTIDLLQADGSALPSAVALTYSPA (Seq. &1). On a essaye huit peptides mer provenant du peptide consensus et diriges contre un anticorps dirige contre le peptide consensus. Des etudes relatives a un anticorps dirige contre des proteines denaturees, provenant d'organismes naturels produisant la famille de proteines, ont ete egalement utiles et ont montre la valeur particuliere de certaines sequences. On a identifie ainsi une sequence de la formule ASVDPTIDLLQA (Seq. &2). Une sequence agrandie de la formule TVTASVDPTIDLLQAD (Seq. &3) s'est revelee particulierement interessante, de meme que des sequences intermediaires, telles que VTASVDPTIDLLQAD (Seq. &4), TASVDPTIDLLQAD (Seq. &5), et TASVDPTIDLLQA (Seq. &6), car elles constituent des sites de fixation d'anticorps diriges contre les proteines denaturees.

Monoclonal antibody which agglutinates E. Coli having the CS4-CFA/I
family protein.

A monoclonal antibody to a consensus peptide of the formula:
VEKNITVTASVDPTDLLQADGSALP-SAVALTYSIPA. The monoclonal antibody of the
invention binds exclusively to the sequence SAVALTYS and has use as a
diagnostic and for prophylaxis against illness arising from E. coli which
produce the CS4-CFA/I family of proteins and for treatment of disease
arising therefrom.

0223661 **DBA Accession No.:** 98-05258 **PATENT**

Monoclonal antibody agglutinating Escherichia coli with CS4/CFA/I family protein
- produced by hybridoma cell culture, used for infection diagnosis and diarrhea therapy

Author: Cassels F; Lees A; Schuman R

Corporate Source: Fort Derrick, MD, USA; Rockville, MD, USA.

Patent Assignee: U.S.Army; Virion-Systems 1998

Patent Number: WO 9805687 **Patent Date:** 980212 **WPI Accession No.:** 98-145553 (9813)

Priority Application Number: US 23075 **Application Date:** 960802

National Application Number: WO 97US13477 **Application Date:** 970801

Language: English

Abstract: A new monoclonal antibody (MAb) that binds exclusively to a defined protein sequence and agglutinates Escherichia coli bearing CS4/CFA/I family protein, is produced by hybridoma 96-109FE8 IH11. The MAb may be used to detect enterotoxigenic E. coli by contacting cultures of the microorganism with the MAb and detecting MAb/CS4-CFA/I protein binding complexes (claimed). The MAb may also be included in compositions with a carrier appropriate for application to bacteria-containing growth media, optionally with a tag, e.g. a fluorescing agent or colometric tag to assist complex identification. The new MAb may be included in a composition with a pharmaceutically acceptable carrier, especially saline, for treating or prophylaxing against illness arising from infection with bacteria bearing the CS4-CFA/I protein, such as diahorrea.
